DAFFODILS

DAFFODILS FOR CALIFORNIA GARDENS: Increased planting of daffodils will help materially in solving the problems of the home owner who hasn't much time to devote to gardening. The original plantings may be made from late September to December. Once made, the bulbs need not be moved for 3 to 5 years. They need no special care or fertilizing. Gophers do not eat them. In summer, shallow rooted annuals or vegetables may be planted over them and irrigated normally without harming them. Only two rules are important: **Plant 4 or 5 inches deep, and do not cut the foliage until it is yellow and ripe.**

For a succession of bloom, plant an early and a late variety together. Suggested combinations: Helios and Croesus; Silver Star and Hera; La Vestale and John Evelyn; Twink and Anna Croft; Jonquil Campenelli and Moonshine or Cheerfulness.

IMPORTANT: Except where specially noted, all our daffodils are No. 1 Double-Nose grade which produce two or more large flowers the first year. Round bulbs, which are commonly offered, usually produce only one flower the first year.

YELLOW POPPY, HERA, DIANA KASNER

QUANTITY RATES: Six bulbs of a variety take the dozen rate; for less than 6 of a variety, the price each is 10% of the dozen prices; 25 of a variety takes the 100 rate. On orders totaling 500 bulbs (any kind) or more, a discount of 10% is allowed.
